

Press release

Big Mother is watching you: Mobile WiFi camera for monitoring babies, dogs, cats or even mice / "Air2U Mobile Eyes HD" with live view and remote control via smartphone app or internet and lots of accessories included

Baby monitors go WiFi: For all those who are not only being monitored by foreign and domestic secret services, but also want to keep an eye on or record what is going on within their own four walls, Air2U now offers the "Mobile Eyes HD" monitoring camera. The little camera records what is happening in your child's bedroom, the garden or the living room onto an SD card or transfers the video via wireless to a smartphone or the internet. Up to four cameras can be installed and controlled at the same time (quad view). The package, which costs just EUR 99.90, includes apps for Android and iOS, the "Unieye" PC software and a range of different holders and fittings.

"Mobile Eyes HD" from Air2U, a sub-brand of Aiptek, has a wide 100 degree view angle and produces good pictures even in low light. The improved weak light functionality of the F2.2 lens and the automatic exposure means you can see Teddy clearly, even when it is dark. The square camera is fitted with a loudspeaker and micro SD slot for Micro SD/SDHC/SDX cards with storage capacity of up to 64 gigabytes. It weighs just 40 grams, is finished in gloss white and is just 48 millimetres square. Its image sensor takes 720p HD recordings at 30 frames per second with automatic white balance included. The focus range is 25 cm to infinite, so the "Mobile Eye" with its wide angle lens misses nothing. The built-in 700 mAh lithium ion battery with Micro USB charging socket provides the power, for use in the garden or during a power failure, for example. A power supply is included in the package.

"Mobile Eyes HD" has two wireless modes, "Direct Mode" and "Cloud Mode". In "Direct Mode" the camera connects directly to a smartphone or iPhone instead of to a router or mobile hotspot. The benefit is that IP settings and configuration are not necessary. If the app supplied is installed on the smartphone, it automatically detects the signal from the

camera. In "Cloud Mode" the user connects the "Mobile Eyes HD" to the router or WiFi hotspot which then transfers the data to terminal devices such as smartphones, notebooks or PCs via the "USTREAM" portal. The user can then view the camera images from anywhere in the world providing an internet connection is available.

The applications supplied are incredibly user-friendly. A smartphone can be used to control the camera remotely, start loop video or photo recordings or zoom using the digital 10x zoom on the "Mobile Eyes HD", it can also view recordings or rotate images.

The handy "Mobile Eyes HD" camera from Air2U is now available for a recommended retail price of EUR 99.90. The package contains a power supply, a universal base, a magnetic holder, a holding strap including a clip, a tripod mount, a clip mount, a USB cable, a CD and a quick start guide.

About "air2U"

The "air2U" business unit has been part of consumer electronics supplier Aiptek for 9 years. From the outset, the brand focused on the development of Bluetooth products. air2u Bluetooth headsets, hands-free kits and loudspeakers have been available since 2005. "air2U" is now back in the market with a motto of "Life is wireless", selling various Bluetooth loudspeakers, healthcare products and wireless SSD storage media.
