CeBIT 2016: Aiptek shows interactive touchscreen projection as well as a symbiosis of portable HD beamer and Bluetooth sound system with an embedded rechargeable battery in Hanover

At this year's CeBIT, Aiptek will present various extraordinary innovations from the beamer sector in hall 15, G66. With the compact „Flicks“ the company introduces the first mobile beamer with HD resolution, 700 lumen of brightness as well as integrated stereo speakers and a rechargeable battery. Therefore, the user is totally independent – both professionally and personally – of the technical conditions on-site. Presentations, movies or football games are played back directly and without any restrictions in best audio- and video quality – even in daylight. Via Bluetooth, audio content can be streamed cordless from smartphones or tablets. For videos and movies there is a HDMI input. The „Flicks“ has a DLP chip from Texas Instruments, a keystone correction and an embedded rechargeable battery, for up to 4 hours of movie playback. The all-in-one system will be on sale from March via Aiptek for 699 Euros.

Another highlight is the Aiptek „DG-VTa“ Dongle, which can be connected easily via HDMI to a beamer to turn any projection surface into an interactive touchscreen display. The supplied pen serves as a sensor – when running it over the projection surface, the „DG-VTa“ notices it like a touchscreen and transfers the signals accordingly. The user can swipe easily over the projection surface to switch between slides in a presentation or even zoom with two pens. Not only useful for business presentations but also for usage in schools or universities. Due to integrated Wi-Fi, content can be streamed directly from a smartphone via the dongle to a beamer. The small dongle is compatible with smartphones using an Android operation

system. The Aiptek „DG-VTa“ will be on sale from May for 249 Euro (SRP).

About Aiptek

Aiptek International (Advanced Intelligent Personal Technologies) was founded in 1997 in Taiwan. The company develops, produces and sells pico projectors, dashcams, LED illumination and Bluetooth speakers, which are produced in its own factory. The German or European branch was founded in 1999 in Willich near Düsseldorf, from which, the supply to whole Europe is coordinated. Other dependences are in Shanghai and the USA. The legendary Pen Cam with which Aiptek started out in 2000 had sold over 2.5 million units within a short space of time. With the current pico projectors, Aiptek consistently implements innovative technologies for trend-conscious customers.
